

Tele-Health in Combating COVID -19

Plexus Cardiac Care & Medi 360 on its Vision of Rural Digital Health, announces another Innovation -**India's First Digital Tele-Cardiology** (Tele- Medicine) Platform In Support to Combat COVID- 19.

Our Honourable Prime Minister, Shree Narendra Modi Ji, in his address to the Nation, also emphasised avoiding unnecessary visits to hospitals / clinics and leverage Technology to connect with Doctors.

Now Plexus Cardiac Care and Medi360, Announces its **PLEXUS CONNECT App** for All Patients who at their Home can get in touch with Team of Physicians & Cardiologists to address all their Medical and Emergency queries and get Free Advices and Consultations.

Plexus Connect App works on android BASED smart phone, **Provides Free Access** to its cloud-based ready-to-use digital solutions and can be enabled instantly without any assistance from the IT staff.

Further wireless medical Consumer IOT Home Based devices like- Pulse Oximeter, Blood Pressure and Glucometer etc, are also available as optional advanced services IN IMMEDIATE FUTURE.

Can telehealth help flatten the curve of COVID-19?

Tele Health, allow Health Care Professionals and Patients to meet by phone or video chat. The current crisis makes virtual care solutions, an indispensable tool to flatten the curve of COVID-19 and help Hospitals to deploy **Medical Staff and Lifesaving Equipment Wisely.**

How can tele-health, help during the COVID-19 outbreak?

By using virtual Technology, for necessary medical care, and deferring elective procedures or check ups, we free up the medical staff and equipment needed for those who become seriously ill from COVID-19.

Additionally, by not Gathering of Patients in small spaces like waiting lounges, of Hospitals and Clinics we **thwart the ability of the virus to hop from one person to another.**

Keeping people apart is called **“social distancing.”**

Keeping healthcare providers apart from patients and other providers is **“medical distancing.”**

Telehealth is one strategy to help us accomplish this.

How can medical staff use telehealth to decide who should come to the hospital?

Medical Professionals By Tele-Health, asks specific questions and gather information to find out whether care is urgently needed and determine if you need to go to the hospital, or if you are better off staying at home.

How can we help one another?

These are challenging times. Let us look to each other for support, kindness, and compassion. We must protect and care for each other, all while keeping a safe distance keeping our humanity at front and carefully use our shared resources.

This Social Distancing using Digital Tele-Health Technology, we can slow the pace at which the infection is spreading.

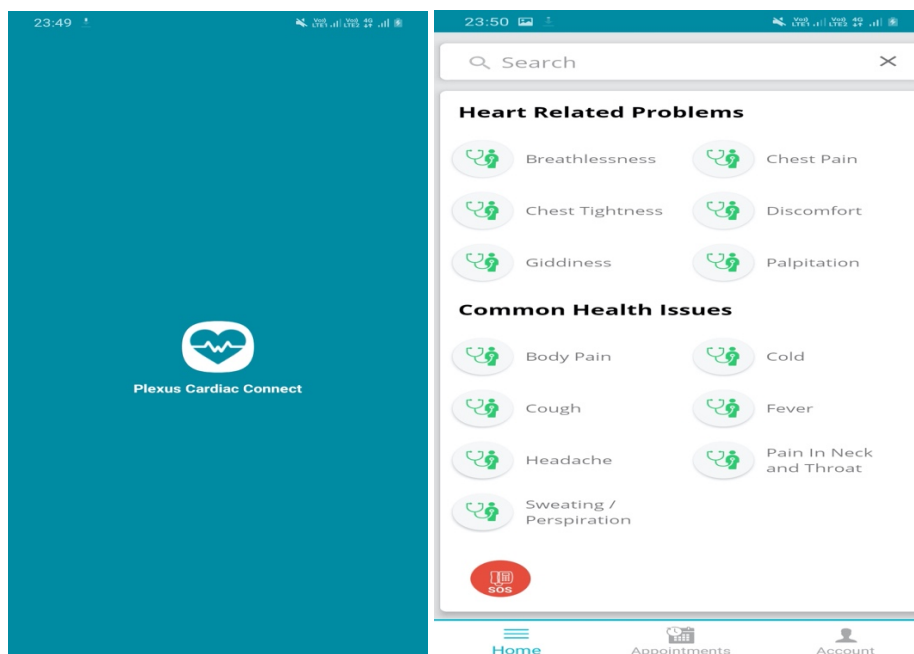

“Patients will get free access to Technology ,to Combat the threat of coronavirus”

Plexus offers its Technology as a Social Giveback and pledges to support the Government’s Initiative.

App is available on Play Store as Plexus Connect App.
